

# Mission: Zero

To Help Reduce And Eliminate HAIs, Including Catheter-Associated Urinary Tract Infections (**CAUTI**) And Central Line-Associated Blood Stream Infections (**CLABSI**)  
As A Part Of Your Infection Control Bundle

**Theraworx**<sup>®</sup>  
**PROTECT**

# Here Is What We Know

The CDC implicates **15 pathogens that account for over 86%** of healthcare-associated infections (HAIs)<sup>1</sup>. Of these pathogens, **10 are considered gut-related**.

## Gaps In Protection

Most hospitals decolonize patients with Chlorhexidine Gluconate (CHG) but do not address perineum decolonization.

## Current Practice Does Not Address Gut Related Pathogens In The Perineum, Which Can Lead To Infections In:

- Tracheotomy tube
- Central venous catheter
- PICC line
- Urinary catheter
- Surgical sites

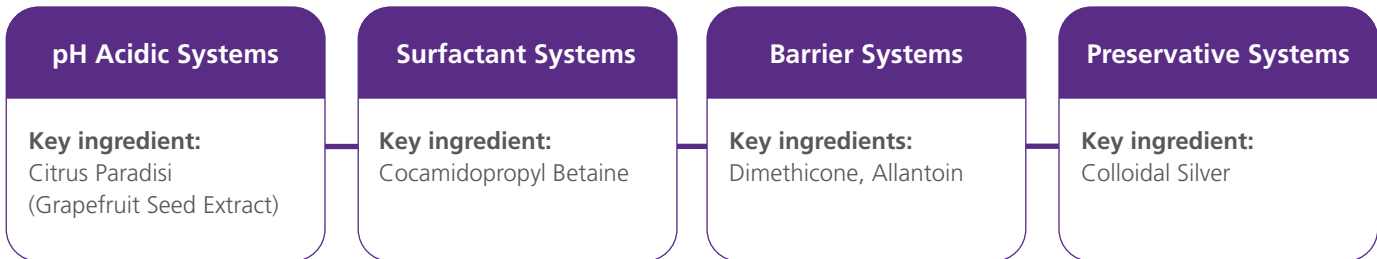

Soap and water or equivalent wipes do not decolonize the perineum and can strip away the skin's natural antimicrobial barrier and defensive functions. Most products that can decolonize the skin are either contraindicated for use in the perineum and in mucosa or lack safety and efficacy data.

# A Clear Solution: pH Matters

An ideal acidic skin pH creates a hostile environment to pathogens, while supporting skin integrity and proper skin function. Theraworx Protect's unique low pH formulation **supports 4 systems** that are critical to driving quality and safety **while helping to reduce hurt and harm.**

## Four Systems Supported By Theraworx Protect

**Theraworx Protect provides advanced total body and perineum care, trusted by hospitals and health care settings as a part of their infection control bundles.**

### Theraworx Protect Addresses the Gaps

- Advanced perineum care
- One step to total body and perineum protection—reducing time and human error
- Safe for use on compromised skin
- Low-pH formulation supports the skin's natural antimicrobial barrier and defensive functions
- Improve quality and safety while helping to reduce hurt and harm
- No contraindications
